

ACCENDO LIGHTING

General Description:

Accendo Lighting has produced what we believe to be absolutely the simplest, easiest, most efficient, most cost effective LED Troffer Retrofit kit in America. This Retrofit kit installs in 3 or 4 minutes, with only your bare hands. As you can see in the photos, there is no need to remove the existing ballasts or sockets from the fluorescent fixture. Just pop off the ballast cover, disconnect power from the ballast, connect power to the LED driver, and plug the driver into the LED strips. It's that simple! The LED strips and the driver are magnetic backed, so they literally attach themselves to the troffer body in seconds.

The entire body of the troffer becomes the heat sink for the strips, making them operate extremely cool, which dramatically extends their lifespan. Our incredibly efficient LEDs produce an amazing 4650 lumens while consuming only 40 watts! This 2-strip kit will produce much more and much better light than a 4-lamp T12 or T8 fixture. Remember that a T12 fixture consumes over 180 watts, and even an "efficient" T8 fixture consumes over 120 watts.

You can easily see that the savings from this 40 watt LED retrofit kit are huge! Most customers realize a return on investment of less than 2 years on these kits, and essentially eliminate maintenance costs for a generation.

Specifications

- 40 watts – 4620 LED lumens
- 5000K standard, other colors available
- Magnetic strips and driver make installation a snap
- No holes to drill
- No screws to turn
- Pre-installed quick-connects on both strips and driver
- Universal voltage drivers accept input voltage of 90-277v AC
- CRI >82
- 5 year warranty
- Operating temperature -40 F to 140 F

Options

- Dimmable with standard dimmer
- Color temps from 2700-7200K
- Frosted lens cover
